# How to Use This Learning Plan

This learning plan provides an overview of all the modules available for 1st Class, including their units, learning goals, and outcomes. Each module is designed to support both new and experienced teachers with easy-to-follow, step-by-step lessons.

## Lesson Types

There are two types of lessons in the Digital Skills Curriculum:

- **Teacher-Led Lessons** The teacher directs and leads students through the lesson, guiding them through the activities and discussions.
- Leacher/Student-Led Lessons Teachers can choose to lead the lesson, or students can follow the step-by-step instructions to work through it independently.

Younger students require a fully guided approach, while older students often benefit from working at their own pace with teacher support as needed.

## Flexible Curriculum Approach

Teachers have the flexibility to choose the modules that best fit their class needs. While there are enough lessons to cover a full school year, it is not necessary to complete all the modules. This allows teachers to tailor the learning experience to their students while ensuring they meet their educational goals.

## **Student Access**

Students log into the platform to access their lessons. They can follow the step-by-step instructions independently, or teachers can lead the lesson as needed.

## **Getting Started**

- 1. **Review the Learning Plan:** Each module includes an overview of its goals, learning outcomes, lesson structure, and required resources. Start by familiarising yourself with the curriculum's scope.
- 2. **Plan Your Lessons:** Every lesson includes step-by-step guidance, accessible from your teacher dashboard. Adjust the pacing and delivery method based on your students' needs.
- 3. Check Required Equipment: Most lessons only require a laptop, Chromebook, or tablet. Some modules may include additional materials like microbits or LEDs. The required equipment is listed at the start of each module and each individual lesson.
- 4. **Support Student Learning:** Encourage students to work through the lessons. No prior coding experience is required—teachers can learn alongside their students.
- 5. Use Assessments: Each lesson includes a multiple-choice quiz to help assess student understanding and track progress.
- 6. **Need Help?:** We're always happy to answer your questions and give advice. You can contact our team at info@codingireland.ie or 01 584 9955.

## **Module: The World of Logic**

The World of Logic module is designed to introduce students to essential logical thinking skills through engaging and interactive activities. Starting with fundamental pattern recognition, students will advance to understanding categorization and identifying outliers. Teachers will guide students through sequencing tasks, reinforcing the importance of order and direction with fun grid games and maze challenges. The module concludes with an introduction to algorithms, where students apply their learning by creating simple dance routines. This module aims to build foundational critical thinking skills, essential for problem-solving in computer science and coding.

| Duration  | Equipment  |
|---|--|
| 3 weeks   | Required Equipment:<br>• Interactive Display<br>• Pen & Paper<br>• Printer   |
| Module Goals  | Module Outcomes  |
| <ol> <li>Develop skills in identifying and completing<br/>patterns.</li> <li>Enhance understanding of categorisation and<br/>outlier identification.</li> <li>Improve ability to sequence events and follow<br/>instructions.</li> <li>Master the concept of mapping and<br/>navigating grids.</li> <li>Understand and apply the principles of<br/>algorithms in creating sequences.</li> </ol> | <ol> <li>Identify and complete patterns using games and worksheets.</li> <li>Understand and apply the concept of categorisation and outlier<br/>identification through interactive tasks.</li> <li>Demonstrate understanding of sequencing and following<br/>instructions through games and worksheets.</li> <li>Apply logical thinking and problem-solving skills in navigating and<br/>mapping grids.</li> <li>Create and understand algorithms through the creation of dance<br/>routines.</li> </ol> |

#### Lesson: Pattern Play: Spot the Sequence

| Beginner | <b>3</b> 0 mins | Deacher led |
|----------|-----------------|-------------|
|----------|-----------------|-------------|

Prepare to introduce the game 'Simon Says' to students, emphasising the importance of listening for the phrase 'Simon says'. Transition into interactive whiteboard games focusing on pattern recognition with themes of fruit, animals, numbers, and letters. Distribute a 'Complete the Pattern' worksheet for independent work, encouraging students to fill in missing parts of sequences. Conclude by reviewing patterns and discussing students' thought processes in completing them.

- Printer
- Interactive Display

| Learning Goals   | Learning Outcomes  |
|--|--|
| <ol> <li>Develop attentive listening skills through the 'Simon Says'</li></ol> | <ol> <li>Identify and follow instructions in the 'Simon Says'</li></ol>                            |
| game.  | game.  |
| <ol><li>Identify and understand patterns and sequences in</li></ol>            | <ol> <li>Recognise and predict patterns in the 'Data Detectives</li></ol>                          |
| different contexts such as fruits and animals.                                 | (Fruit)' game.   |
| <ol> <li>Apply knowledge of numerical and alphabetical order to</li></ol>      | <ol><li>Apply pattern recognition skills to different themes in</li></ol>                          |
| complete sequences.  | the 'Data Detectives (Animals)' game.  |
| <ol> <li>Enhance problem-solving skills by completing missing</li></ol>        | <ol> <li>Order numbers correctly in the 'Data Detectives</li></ol>                                 |
| parts of patterns on a worksheet.  | (Numbers)' game.   |
| <ol> <li>Articulate reasoning behind pattern completion choices</li></ol>      | <ol> <li>Sequence letters accurately in the 'Data Detectives</li></ol>                             |
| during class discussions.  | (Letters)' game.   |
|  | <ol><li>Complete missing parts of sequences in the<br/>'Complete the Pattern' worksheet.</li></ol> |
|  | 7. Explain reasoning behind pattern completion choices during the 'Conclusion' discussion.         |

#### Lesson: Which One's Different? The Odd One Out

| Beginner | <b>O</b> 30 mins | 🞜 Teacher led |
|----------|------------------|---------------|
|----------|------------------|---------------|

Prepare for an engaging lesson on categorisation and identification of outliers. Start with a fun game of 'Word Tennis' to warm up the class. Then, use a slideshow to display groups of items, asking students to identify the odd one out. Distribute worksheets for students to circle the odd item in each group and create their own exercise. Conclude by reinforcing the importance of categorisation in computer science and coding.

- Printer
- Interactive Display

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Develop understanding of categorisation and</li></ol>                          | <ol> <li>Identify and categorise items based on their characteristics</li></ol>   |
| identification of outliers.   | during the 'Word Tennis' game.  |
| <ol><li>Enhance critical thinking skills through interactive</li></ol>                  | <ol><li>Explain the reasoning behind the identification of outliers in</li></ol>  |
| activities.   | the 'What doesn't Belong' slideshow.  |
| <ol> <li>Identify items that do not belong in a group using visual aids.</li> </ol>     | <ol> <li>Accurately identify the odd one out in each group on the<br/>'What doesn't belong' worksheet.</li> </ol>                   |
| <ol><li>Apply knowledge to complete a worksheet,</li></ol>                              | <ol> <li>Create a unique 'Odd One Out' exercise on the worksheet,</li></ol>   |
| identifying the odd one out in various groups.  | demonstrating understanding of the concept.   |
| 5. Design their own 'Odd One Out' exercise, demonstrating understanding of the concept. | <ol> <li>Apply the concept of categorisation and outlier identification,<br/>fundamental to computer science and coding.</li> </ol> |

#### Lesson: What Happens Next? First/Then Fun!

| Beginner | S 30 mins | Teacher led |
|----------|-----------|-------------|
|----------|-----------|-------------|

In this lesson, you'll guide students through a series of activities designed to enhance their understanding of sequencing and following instructions. Starting with a game of Simon Says, you'll then move onto sequencing daily events, followed by interactive games. The lesson concludes with a 'First/Then' worksheet, encouraging students to consider what comes next in a sequence of events.

- Printer
- Interactive Display

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Develop skills in following and<br/>understanding instructions through<br/>interactive games.</li> <li>Understand and apply the concept of<br/>sequencing in daily activities.</li> <li>Enhance critical thinking skills by<br/>predicting subsequent events in a given<br/>scenario.</li> <li>Improve communication skills by<br/>explaining reasoning behind chosen<br/>sequences.</li> <li>Recognise the importance of sequencing<br/>and clear instructions in the context of<br/>coding.</li> </ol> | <ol> <li>Demonstrate understanding of following instructions through<br/>participation in a game of Simon Says.</li> <li>Arrange pictures of daily events in the correct sequence to show<br/>understanding of sequencing.</li> <li>Apply sequencing skills to arrange steps involved in daily activities<br/>such as putting on shoes, eating cereal, planting a seed, and reading a<br/>book.</li> <li>Complete the 'First/Then' worksheet by identifying and illustrating<br/>what comes next after a given activity.</li> <li>Explain the chosen sequence of events and justify the reasoning<br/>behind the choices made on the 'First/Then' worksheet.</li> </ol> |

#### Lesson: Grid Games: Mapping the 3x3

| Beginner | <b>§</b> 30 mins | Teacher/Student led |
|----------|------------------|---------------------|
|----------|------------------|---------------------|

Prepare for an engaging lesson that combines games and worksheets to teach students about following and giving instructions. Start with a game of Simon Says, emphasising the importance of listening to commands. Introduce the grid game, guiding characters to specific locations. Progress to an advanced version of the game, then move on to a 'Giving Directions' worksheet, where students guide a bird to its fruit. Conclude by summarising the activities and their relevance to logical thinking, problem-solving, and coding.

- Printer
- Interactive Display

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Develop ability to follow and give precise<br/>instructions.</li> <li>Understand the concept of grid mapping and its<br/>application.</li> <li>Enhance logical thinking and problem-solving skills<br/>through interactive games.</li> <li>Apply learned skills in a practical context through a<br/>worksheet activity.</li> <li>Recognise the importance of precise instructions in<br/>the digital world and its relevance to programming.</li> </ol> | <ol> <li>Follow instructions accurately in the game of Simon Says.</li> <li>Guide characters to specific locations on a grid using clear,<br/>step-by-step instructions in the Grid Game.</li> <li>Progress to the advanced Grid Game, demonstrating<br/>increased proficiency in giving directions.</li> <li>Complete the 'Giving Directions' worksheet by guiding a<br/>bird to its fruit using a sequence of instructions.</li> <li>Reflect on the importance of precise instructions and its<br/>relevance to logical thinking, problem-solving, and coding.</li> </ol> |

#### Lesson: Mastering the Maze: Navigating the 4x4

| Beginner | S 30 mins | Teacher led |
|----------|-----------|-------------|
|----------|-----------|-------------|

Embark on a journey to understand the importance of sequence and direction in coding. You'll guide a bird to its fruit on a 5x5 grid, take turns giving directions, and work independently on a worksheet. Remember, careful planning of your sequence is key to success. Let's get started!

- Printer
- Interactive Display

| Learning Goals   | Learning Outcomes   |
|--|---|
| <ol> <li>Develop an understanding of sequence and</li></ol>                    | <ol> <li>Understand and apply the concepts of sequence and direction</li></ol>  |
| direction in the context of coding.  | in a 5x5 grid navigation task.  |
| <ol><li>Apply navigational skills in a practical, hands-on activity.</li></ol> | <ol><li>Effectively communicate and follow directions as both a<br/>navigator and a robot in a classroom setting.</li></ol> |
| <ol> <li>Enhance problem-solving abilities through grid</li></ol>              | <ol><li>Successfully guide a bird to its fruit on a 5x5 grid using a</li></ol>  |
| navigation tasks.  | sequence of directional commands.   |
| <ol> <li>Work independently to plan and execute a</li></ol>                    | <ol> <li>Independently complete a 4x4 grid worksheet, demonstrating</li></ol>   |
| sequence of directions.  | careful planning and double-checking of directions.   |
| <ol> <li>Reflect on learning experiences and share</li></ol>                   | <ol><li>Reflect on learning, identify challenges, and share strategies for</li></ol>  |
| strategies for planning and problem-solving.                                   | planning the bird's path in a group discussion.   |

#### Lesson: Dance Commands: Creating Move Algorithms

In this lesson, you'll guide students through understanding algorithms via interactive activities. Begin by explaining algorithms using a slideshow, then transition into creating "dance algorithms". Students will suggest dance moves to form a class dance routine. Afterwards, they'll work in small groups to create their own dance routines. The lesson concludes with a reflection on the importance of algorithms in coding.

- Pen & Paper
- Interactive Display

| Learning Goals   | Learning Outcomes  |
|--|--|
| <ol> <li>Understand the concept of algorithms as a set of</li></ol>  | <ol> <li>Understand and explain the concept of an algorithm as a set</li></ol>   |
| instructions followed in a specific order.                           | of instructions.   |
| <ol><li>Develop the ability to create and interpret simple</li></ol> | <ol><li>Create and demonstrate a dance routine by following a</li></ol>          |
| algorithms using dance moves.  | sequence of steps, representing an algorithm.                                    |
| <ol><li>Enhance teamwork and collaboration skills</li></ol>          | <ol><li>Develop and use symbols to represent different dance moves</li></ol>     |
| through creating group dance algorithms.                             | in an algorithm.   |
| <ol> <li>Improve creativity by inventing unique dance</li></ol>      | <ol> <li>Work collaboratively in small groups to create a simple dance</li></ol> |
| move sequences.  | routine, demonstrating understanding of sequence in an                           |
| <ol> <li>Apply understanding of algorithms to real-world</li></ol>   | algorithm.   |
| activities, laying a foundation for future coding                    | 5. Reflect on the concept of algorithms and its application in                   |
| lessons.   | coding and everyday tasks.   |

# **Module: Adventures in Digital Creation**

This module introduces students to the world of digital creation through Scratch Junior. Starting with basic motion blocks, students will progressively learn to create projects, change backgrounds, add characters, and control character speed. Each lesson concludes with a challenge and free play exploration time. Teachers should encourage creativity and experimentation, and be prepared to recap on previous lessons as necessary.

| Duration  | Equipment   |
|---|---|
| 4 weeks   | Required Equipment:<br>• iPad/Tablet  |
| Module Goals  | Module Outcomes   |
| <ol> <li>Master the basics of Scratch Junior, including project creation,<br/>interface exploration, and the use of basic motion blocks.</li> <li>Develop skills in changing backgrounds and creating unique<br/>character routines within Scratch Junior.</li> <li>Learn to add and control multiple characters within a project,<br/>including synchronising their movements.</li> <li>Gain proficiency in controlling the size and movement of objects<br/>across different backgrounds.</li> <li>Understand and apply advanced programming concepts such as<br/>controlling character speed, sequencing commands, and<br/>looping actions.</li> </ol> | <ol> <li>Manipulate basic motion blocks to move<br/>characters in Scratch Junior.</li> <li>Create and modify backgrounds, and<br/>choreograph a dance routine for characters in<br/>Scratch Junior.</li> <li>Add a second character in Scratch Junior and<br/>coordinate their movements.</li> <li>Programme a car to drive across a city<br/>background and adjust its size in Scratch<br/>Junior.</li> <li>Control character speed, sequence commands,<br/>and create a race with different sprites in<br/>Scratch Junior.</li> <li>Programme a spaceman character to float in<br/>space using repeat actions in Scratch Junior.</li> </ol> |

#### Lesson: Move and Groove: The Dance Party Begins!

| Beginner     Image: Solution of the sector of the secto |  |
|---|--|
|---|--|

In this lesson, teachers will guide students through the basics of coding using Scratch Jr. Students will learn to control character movements and create their own dance routines. They'll explore changing backgrounds, creating sequences, and understanding the concept of cause and effect. Teachers will need to demonstrate how to use the green flag block and movement blocks, and guide students in setting the stage for their dance party. The lesson concludes with a review and encouragement for students to apply their new skills in other areas.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes  |
|--|--|
| <ol> <li>Understand and utilise Scratch Jr. as a tool for coding and<br/>creative expression.</li> </ol>   | <ol> <li>Understand and utilise Scratch Jr. to create basic coding sequences.</li> </ol>       |
| <ol><li>Grasp the concept of coding sequences using the green<br/>flag and movement blocks.</li></ol>      | <ol><li>Apply the use of basic movement blocks to control<br/>character actions.</li></ol>     |
| <ol><li>Develop skills in controlling character actions and<br/>movements through coding.</li></ol>        | <ol> <li>Initiate coding sequences using the green flag block<br/>in Scratch Jr.</li> </ol>    |
| <ol><li>Apply creativity in setting the stage with different<br/>backgrounds for their projects.</li></ol> | <ol> <li>Manipulate backgrounds in Scratch Jr. to set the scene for their projects.</li> </ol> |
| <ol> <li>Create a unique dance routine by combining different<br/>movement blocks.</li> </ol>              | 5. Create a dance routine for a character using a sequence of movement blocks.                 |

#### Lesson: City Cruise: Driving Through the Streets

Prepare action cards for a game of charades, explaining the rules to students. Introduce the car driving activity in Scratch Jr, explaining how they'll program a car to navigate city streets. Show how to remove Scratch the Cat from the project, then demonstrate adding a car character and changing the background to a city scene. Teach students how to create a sequence of movement blocks for the car. For advanced students, introduce resizing the car. Encourage exploration and creativity during free play, prompting with questions about other vehicles and their placement.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes  |
|--|--|
| <ol> <li>Understand and apply the process of<br/>removing and adding characters in a digital<br/>project.</li> <li>Develop the ability to change backgrounds in<br/>a digital environment.</li> <li>Gain skills in recreating a digital scenario with<br/>minimal guidance.</li> <li>Acquire advanced skills in resizing characters<br/>within a digital project.</li> <li>Enhance creativity and exploration by adding<br/>diverse elements to a digital scenario.</li> </ol> | <ol> <li>Demonstrate ability to remove characters from a project in the application.</li> <li>Create a sequence involving a car character driving across a city background.</li> <li>Recreate a given video sequence independently.</li> <li>Apply advanced skills to resize the car character within the sequence.</li> <li>Explore the application further by adding different types of vehicles and experimenting with their placement and movement.</li> </ol> |

#### Lesson: Floating in Space: Looping with the Spaceman

| Beginner | <b>S</b> 30 mins | 🛃 Teacher led |
|----------|------------------|---------------|
|----------|------------------|---------------|

This lesson guides students through a space adventure using Scratch Jr. They'll learn to programme a spaceman to float in space, introducing the concept of repeating actions with the repeat block. The lesson starts with a discussion on space movement, followed by practical steps in Scratch Jr. to create the floating spaceman. Students will then add a repeat block for continuous movement, customise their astronaut, and finally, create a 'space dance' using different sequences and loops.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes   |
|--|---|
| <ol> <li>Understand and apply the concept of loops in</li></ol>                                    | <ol> <li>Understand and apply the concept of repeating actions</li></ol>  |
| coding using the repeat block in Scratch Jr.   | using the repeat block in Scratch Jr.   |
| <ol><li>Program a spaceman character to simulate floating</li></ol>                                | <ol><li>Programme a spaceman character to simulate floating in</li></ol>  |
| in space using a sequence of movement blocks.  | space using a series of movement blocks.  |
| <ol><li>Explore the concept of space movement and how it differs from movement on Earth.</li></ol> | <ol> <li>Utilise the repeat block to create an endless floating motion,<br/>demonstrating an understanding of loops in coding.</li> </ol> |
| <ol> <li>Customise a character in Scratch Jr. using the</li></ol>                                  | <ol> <li>Create a "space dance" by experimenting with different</li></ol>   |
| camera feature to personalise the spaceman.  | sequences of movements and using the repeat block to  |
| <ol> <li>Apply creativity and coding skills to create a unique</li></ol>                           | create patterns or loops.   |
| 'space dance' using different sequences of   | 5. Customise the astronaut character in Scratch Jr.,  |
| movements and loops.   | demonstrating creativity and personalisation in coding.   |

#### Lesson: Dribble and Dunk: Basketball Fun with Scratch Jr.

Initiate the lesson by discussing how a ball moves, focusing on bouncing. Guide students to set the scene in Scratch Jr., selecting a basketball court background and adding a basketball sprite and Scratch the Cat. Demonstrate how to program the basketball to bounce and move using parallel coding. Students then program Scratch the Cat to mimic the basketball's movement. For advanced learners, introduce the challenge of programming the ball to shoot into the basket. Conclude by encouraging further experimentation and sharing of projects.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes  |
|---|--|
| <ol> <li>Understand and articulate the concept of how a ball moves,<br/>particularly in the context of basketball.</li> <li>Select and utilise appropriate sprites and backgrounds in<br/>Scratch Jr. to create a basketball court scene.</li> <li>Apply coding principles to program a basketball sprite to<br/>bounce and move across the court.</li> </ol> | <ol> <li>Understand and discuss the movement of a<br/>basketball when thrown or dribbled.</li> <li>Select and add appropriate background and<br/>characters in Scratch Jr. for a basketball game<br/>scenario.</li> <li>Program a basketball to bounce and move</li> </ol>   |
| <ol> <li>Develop parallel coding skills to synchronise the movement<br/>of two sprites, simulating the action of dribbling a basketball.</li> <li>Extend coding skills to create a sequence that simulates<br/>shooting a basketball into a hoop, demonstrating problem-<br/>solving and creativity.</li> </ol>   | <ol> <li>Frogram a backetball to boarder and more<br/>forward using parallel coding in Scratch Jr.</li> <li>Program Scratch the Cat to mimic the movement<br/>of the basketball, creating a dribbling effect.</li> <li>Extend the program to simulate shooting the<br/>basketball into the basket, for those seeking an<br/>additional challenge.</li> </ol> |

#### Lesson: Ready, Set, Go! The Great Frog vs. Pig Race

| Beginner     Image: Solution of the sector of the secto |  |
|---|--|
|---|--|

Engage students in a discussion about animal movement, leading to the concept of programming a race between two animals with different speeds. Set the scene with a suitable background in Scratch Jr. Introduce the characters, a fast frog and a slow pig. Teach parallel coding, allowing the frog to jump and move forward simultaneously. Introduce the variable speed block to control the pig's speed. Start the race and observe the effects of different speeds and movements. For early finishers, add a third character to the race for an extra challenge.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes   |
|--|---|
| <ol> <li>Understand and discuss the different ways<br/>animals move and how this can be represented<br/>in a digital race.</li> <li>Select and apply appropriate backgrounds in<br/>Scratch Jr. to enhance the realism of the race<br/>scenario.</li> <li>Identify and utilise the unique movement<br/>characteristics of different animals in the<br/>programming of a digital race.</li> <li>Develop and apply parallel coding skills to enable<br/>simultaneous actions in digital characters.</li> <li>Use variable speed blocks in Scratch Jr. to<br/>control the speed of digital characters, reflecting<br/>their natural movement speeds.</li> </ol> | <ol> <li>Identify and discuss the different ways animals move and<br/>apply this knowledge to a programming context.</li> <li>Select and set an appropriate background for a race scenario<br/>in Scratch Jr.</li> <li>Choose and describe the characteristics of two different race<br/>characters, a frog and a pig, in Scratch Jr.</li> <li>Apply the concept of parallel coding to make the frog<br/>character jump and move forward simultaneously.</li> <li>Use the variable speed block to control the speed of the pig<br/>character, demonstrating an understanding of the concept of<br/>variable speeds in programming.</li> <li>Observe and analyse the outcome of the race, reflecting on<br/>how different speeds and movements affect the result.</li> </ol> |

#### Lesson: Talk It Out: Programming a Fun Conversation

| Beginner     Beginner   Image: Solution of the solut |  |
|--|--|
|--|--|

Prepare to introduce students to Scratch Jr's animal characters and their sounds. Guide them through recording sounds for their chosen animal. Introduce a complex task of creating a classroom setting with a teacher-student interaction. Demonstrate recording dialogue and using the 'wait' function for natural conversation flow. Allow time for students to experiment with their scenes, encouraging creativity and reinforcement of learned skills.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes  |
|---|--|
| <ol> <li>Identify and replicate various animal sounds.</li> <li>Record and attach sounds to characters in<br/>Scratch Jr.</li> <li>Create a classroom scene with multiple<br/>characters in Scratch Jr.</li> <li>Record and sequence dialogue between<br/>characters.</li> <li>Apply the 'wait' function to control timing of<br/>dialogue.</li> <li>Experiment with different scenarios and<br/>character interactions in Scratch Jr.</li> </ol> | <ol> <li>Identify and replicate various animal sounds using Scratch Jr.</li> <li>Record and attach sounds to chosen characters in Scratch Jr.</li> <li>Create a classroom scene with two characters, a teacher and a student, in Scratch Jr.</li> <li>Record a dialogue between the teacher and student characters, including a question and response.</li> <li>Apply the 'wait' function in Scratch Jr. to control the timing of the dialogue for a natural conversation flow.</li> </ol> |

#### Lesson: Maze Master: Help Your Character Escape!

| Beginner | <b>S</b> 30 mins | 🞜 Teacher led |
|----------|------------------|---------------|
|----------|------------------|---------------|

Prepare to engage students with the concept of mazes, guiding them to create their own in Scratch Jr. Demonstrate how to select and edit the background, draw a simple maze, and place a character. Show them how to use movement blocks to navigate the maze and encourage testing and adjusting their code. Extend the challenge by prompting them to create more complex mazes. Conclude by inviting students to share their mazes, highlighting the skills they've developed in creative design, problem-solving, and sequencing.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes  |
|--|--|

# **Module: Electricity and Simple Circuits**

This module involves guiding students through the understanding and application of electricity and simple circuits using Snap Circuits. Teachers will facilitate hands-on activities, including assembling circuits and experimenting with various components such as switches, LED lights, motors, and phototransistors. Emphasise safety, correct component placement, and the function of each part. Encourage exploration and reinforce learning through play. Familiarise yourself with Snap Circuits and prepare for each lesson by ensuring all necessary components are available.

| Duration  | Equipment  |
|---|--|
| 3 weeks   | Required Equipment:<br>• Snap Circuits   |
| Module Goals  | Module Outcomes  |
| <ol> <li>Understand the basic principles of electricity and its components<br/>such as switches, LED lights, motors, and phototransistors.</li> <li>Assemble and disassemble simple circuits using Snap Circuits,<br/>demonstrating practical application of theoretical knowledge.</li> <li>Identify and explain the function of different components within a<br/>circuit, including switches, LED lights, motors, and<br/>phototransistors.</li> <li>Experiment with different circuit configurations and understand<br/>the impact of component placement and direction of electricity<br/>flow.</li> <li>Explore the concepts of electrical conduction, identifying<br/>conductors and insulators through hands-on experimentation.</li> </ol> | <ol> <li>Assemble and operate a simple circuit using<br/>a switch block and lamp block.</li> <li>Construct and control an electric light circuit<br/>using a press switch.</li> <li>Build and activate a motor fan circuit using a<br/>press switch.</li> <li>Create a basic LED circuit, understanding the<br/>importance of electricity flow direction.</li> <li>Construct a light-responsive circuit using a<br/>phototransistor and LED light block.</li> <li>Assemble a circuit and identify electrical<br/>conductors and insulators through<br/>experimentation.</li> </ol> |

#### **Lesson: Electric Light and Switch**

| Beginner | <b>O</b> 30 mins | Teacher led |
|----------|------------------|-------------|
|----------|------------------|-------------|

Prepare for this interactive lesson by familiarising yourself with the Snap Circuits tool. You'll guide students through understanding electricity, switches, and how they work together to light up a bulb. The lesson involves hands-on activities like assembling a circuit on a base grid, inserting batteries, and placing components like a battery holder, wire block, lamp block, and switch block. Ensure students understand the grid system for placing components. The lesson culminates in lighting up the assembled circuit, providing a practical demonstration of the concepts learned.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Understand the basic principles of electricity and its<br/>everyday applications.</li> </ol>   | 1. Understand and explain the function of an electric light and switch.   |
| <ol><li>Identify and explain the function of a switch in an<br/>electrical circuit.</li></ol>   | <ol><li>Assemble a Snap Circuit correctly following the<br/>provided steps.</li></ol>   |
| <ol><li>Construct a simple electrical circuit using Snap Circuits,<br/>demonstrating practical skills and safety awareness.</li></ol>                                 | 3. Identify and correctly place the components of a Snap<br>Circuit: base grid, battery holder, wire block, lamp                        |
| <ol> <li>Apply knowledge of electricity and circuits to explain why<br/>a light bulb lights up when connected to a battery and<br/>controlled by a switch.</li> </ol> | <ul><li>block, and switch block.</li><li>4. Demonstrate the operation of a Snap Circuit by successfully lighting up the lamp.</li></ul> |
| <ol> <li>Develop problem-solving skills by troubleshooting and<br/>correcting any issues with the circuit to ensure the light<br/>bulb lights up.</li> </ol>          | <ol> <li>Apply the concept of electricity flow in a circuit to a<br/>real-world analogy.</li> </ol>                                     |

#### **Lesson: Electric Light and Press Switch**

| Beginner | <b>I</b> 30 mins | Teacher led |  |
|----------|------------------|-------------|--|
|----------|------------------|-------------|--|

For this lesson, you'll be guiding students through the process of building an electric light circuit with a press switch. Begin with a refresher on electricity and switches, then move onto the practical application using Snap Circuits. Ensure students understand the grid system for placement of components. As they build the circuit, explain the function of each part. Once the circuit is complete, they should be able to light up the lamp using the press switch. Encourage exploration and experimentation after the main task, reinforcing learning through play.

Required equipment for this lesson:

| Learning Goals   | Learning Outcomes  |  |
|--|--|--|
| <ol> <li>Understand the basic principles of electricity<br/>and its flow.</li> </ol> | 1. Understand and explain the function of a press switch in an electrical circuit.   |  |
| <ol><li>Recognise the function and importance of a</li></ol>                         | <ol><li>Correctly assemble a basic circuit using Snap Circuits, including a</li></ol>  |  |
| switch in controlling the flow of electricity.                                       | battery holder, wire block, lamp block, and press switch block.  |  |
| <ol> <li>Construct a simple circuit using a press</li></ol>                          | <ol> <li>Demonstrate the operation of the assembled circuit by successfully</li></ol>  |  |
| switch and a light bulb.   | lighting up the lamp using the press switch.   |  |
| <ol> <li>Apply knowledge of circuits to successfully</li></ol>                       | <ol> <li>Identify and correct any issues in the circuit assembly that prevent</li></ol>  |  |
| light up a bulb using a press switch.  | the lamp from lighting up.   |  |
| 5. Explore and experiment with different circuit configurations using Snap Circuits. | <ol><li>Apply the knowledge gained to explore and create different circuit<br/>configurations using the Snap Circuits set.</li></ol> |  |

#### Lesson: Motor Fan and Press Switch

| Beginner | <b>§</b> 30 mins | Teacher led |
|----------|------------------|-------------|
|----------|------------------|-------------|

This lesson involves guiding students through the process of building a circuit using a Snap Circuits set, ultimately powering a motor to make a fan fly. Start by explaining the concepts of electricity and motors, then guide students through each step of the circuit construction, from preparing the base grid to inserting batteries, placing the battery holder, wire block, motor block, and press switch block. Ensure students understand the function of each component. Attach the fan and demonstrate how the press switch activates the motor. Conclude with an exploration period, encouraging students to experiment with different circuits. Safety warnings should be emphasised throughout.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Understand the concept of electricity and how it<br/>powers a motor.</li> </ol>                        | <ol> <li>Understand the concept of electricity and how it powers a motor.</li> </ol>                |
| <ol> <li>Learn to assemble a simple circuit using a base grid,</li></ol>  | <ol> <li>Identify and correctly place the base grid, battery holder,</li></ol>                      |
| battery holder, wire block, motor block, and press  | wire block, motor block, and press switch block on the  |
| switch block.   | Snap Circuits set.  |
| <ol> <li>Develop skills in following step-by-step instructions</li></ol>  | <ol><li>Demonstrate safe handling of the Snap Circuits set,</li></ol>                               |
| to build a functioning circuit.   | particularly the motor block and fan.   |
| <ol> <li>Appreciate the importance of safety when working</li></ol>   | <ol> <li>Successfully construct a circuit that powers a motor to</li></ol>                          |
| with electrical circuits and moving parts.  | make a fan fly.   |
| <ol> <li>Encourage exploration and application of learned<br/>concepts to create different circuits.</li> </ol> | 5. Apply knowledge of circuits to explore and create new configurations with the Snap Circuits set. |

Teacher Learning Plan / Digital Skills Curriculum 2024/25 / 1st Class / Module: Electricity and Simple Circuits / Unit: Week 4

## Week 4

#### Lesson: LED Circuit

| Beginner | S 30 mins | Teacher led |
|----------|-----------|-------------|
|----------|-----------|-------------|

This lesson involves building a basic LED circuit and understanding the direction of electricity flow. Teachers should guide students through each step, from setting up the base grid to inserting batteries, placing the battery holder, wire block, LED light block and press switch block. Emphasise the importance of correct placement, particularly for the LED light block. Encourage students to experiment with LED direction and explore different circuit configurations. Reinforce learning by engaging with students during their exploration.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Understand the basic principles of an LED circuit, including the direction of electricity flow.</li> <li>Develop practical skills in assembling a basic LED circuit using Snap Circuits.</li> <li>Recognise the importance of correct placement of circuit components, particularly the LED light block.</li> <li>Apply knowledge of circuitry to experiment with and troubleshoot LED circuits.</li> <li>Develop a curiosity for further exploration and understanding of electrical circuits.</li> </ol> | <ol> <li>Construct a basic LED circuit using Snap Circuits.</li> <li>Identify and correctly place the components of an LED circuit including the battery holder, wire block, LED light block, and press switch block.</li> <li>Demonstrate understanding of the direction of electricity flow in a circuit by correctly placing the positive and negative sides of the LED light block.</li> <li>Explain the effect of reversing the direction of the LED light block on the functioning of the circuit.</li> <li>Apply knowledge of circuits to experiment with and build different configurations using Snap Circuits.</li> </ol> |

#### Lesson: LED Circuit and Phototransistor

| Beginner     Image: Solution of the sector of the secto |  |
|---|--|
|---|--|

Prepare to introduce phototransistors and their function in a circuit. Ensure a stable workspace for each group and verify the presence of batteries in each Snap Circuits set. Guide students through placing the battery holder, wire block, red LED light block, and phototransistor block on the base grid, emphasising correct placement for circuit functionality. Demonstrate the circuit in action by shining a light into the phototransistor block. Encourage exploration and reinforce concepts learned throughout the lesson.

Required equipment for this lesson:

| Learning Goals  | Learning Outcomes   |
|---|---|
| <ol> <li>Understand the function and application of</li></ol>   | <ol> <li>Understand the function and application of a</li></ol>   |
| phototransistors in circuits.   | phototransistor in a circuit.   |
| <ol> <li>Develop skills in assembling a circuit using a base grid,</li></ol>  | <ol> <li>Correctly assemble a circuit using a base grid, battery</li></ol>  |
| battery holder, wire block, LED light block, and  | holder, wire block, LED light block, and phototransistor  |
| phototransistor block.  | block.  |
| <ol> <li>Recognise the importance of correct placement and</li></ol>  | <ol> <li>Identify and correctly position the positive and negative</li></ol>  |
| direction of circuit components for proper electricity  | sides of the LED light block and phototransistor block  |
| flow.   | in a circuit.   |
| <ol> <li>Observe and explain how light can control electricity in a circuit.</li> <li>Apply knowledge and skills to explore and create different circuits.</li> </ol> | <ol> <li>Demonstrate how light can complete a circuit and<br/>activate an LED light by shining a light into the<br/>phototransistor block.</li> </ol> |
|   | <ol> <li>Apply knowledge of circuits to explore and create<br/>different configurations using available blocks.</li> </ol>                            |

Teacher Learning Plan / Digital Skills Curriculum 2024/25 / 1st Class / Module: Electricity and Simple Circuits / Unit: Week 6

### Week 6

#### **Lesson: Conduction**

| Beginner | S 30 mins | Teacher led |
|----------|-----------|-------------|
|----------|-----------|-------------|

In this lesson, students will explore the concept of electrical conduction through a hands-on experiment. They will build a circuit using a base grid, batteries, a battery holder, a red LED light block, a 100  $\Omega$  resistor block, and wire blocks. They will then test various objects and materials to determine if they conduct electricity. The lesson concludes with a review of their findings and a discussion about conductors and insulators. Ensure all components are handled safely and stored properly post-lesson.

#### Required equipment for this lesson:

Snap Circuits

| earning Goals  | Learning Outcomes   |
|--|---|
| <ol> <li>Understand the concept of electrical conduction and<br/>identify materials that can conduct electricity.</li> </ol>   | <ol> <li>Understand and explain the concept of electrical<br/>conduction.</li> </ol>  |
| <ol> <li>Build a basic circuit using a base grid, batteries, a<br/>battery holder, an LED light block, a resistor block,<br/>and wire blocks.</li> </ol>   | <ol> <li>Identify and correctly assemble components of a circuit<br/>including a battery holder, LED light block, resistor block,<br/>and wire blocks.</li> </ol>           |
| 3. Recognise the importance of correct placement and connection of circuit components for successful electrical flow.  | <ol> <li>Conduct an experiment to test the conductivity of various<br/>objects and materials.</li> <li>Classify objects and materials as conductors or insulator</li> </ol> |
| <ol> <li>Conduct experiments to test the conductivity of<br/>various objects and materials.</li> <li>Reflect on the results of the experiments, reinforcing<br/>the understanding of conductors and insulators.</li> </ol> | <ul><li>based on experimental results.</li><li>5. Disassemble and store circuit components correctly f future use.</li></ul>  |
